I promised to describe our space ship more fully. First off, let us get an idea of the immensity of this ship. It is 150 miles from point of one crescent to the other point and 100 miles broad at its deepest point. This in itself constitutes a small nation. Instead of a salable, it is formed of mabonite and is circumferenced with this metal 200 miles over the top in order to have the forming of an atmosphere from an artificial sun placed at its highest point. We have fields with brooks and streams that run into a small lake. These are endowed with life such as you would find in your own fields and streams in order to have a self created atmosphere. This gives us also gardens and we have animals here, such as horses, cows, and dogs and the usual country animals. We also have the insects that balance and harmonize this nature which we have reproduced.

In order to lighten the immense load we have a magnetic device that degravitates from the bottom the amount of pull that is created from the gravity created above. I cannot describe this as well as our technicians but in the end result the weight is dissipated. We have recreational centers and swimming pools here. There are no women on this ship because the
